Creating a Table

Create and Delete Table

To create a table in a database, you use the SQL statement `CREATE TABLE`. To delete a table, you use the SQL statement `DROP TABLE`

- To add a table, use the SQL statement `CREATE TABLE TableName (Col1 DataType1, Col2 DataType2, ...)`
- To designate a column as the primary key, use the `PRIMARY KEY` constraint after the column's data type
- The `NOT NULL` constraint specifies that a column cannot be left empty
- Can use `IF NOT EXISTS` clause

```
conn = sqlite3.connect('inventory.db')
cur = conn.cursor()
sql = '''CREATE TABLE Inventory
                (ItemID INTEGER PRIMARY KEY NOT NULL,
                  ItemName TEXT,
                  Price REAL)'''
cur.execute(sql)
cur.commit
conn.close()
```

Deleting a Table

Create and Delete Table

To create a table in a database, you use the SQL statement `CREATE TABLE`. To delete a table, you use the SQL statement `DROP TABLE`

```
conn = sqlite3.connect('inventory.db')
cur = conn.cursor()
sql = '''DROP TABLE Inventory'''
cur.execute(sql)
cur.commit
conn.close()
```

- To delete a table use the `DROP TABLE` STATEMENT
- Can use `IF EXISTS` to avoid errors
